

Flexitank Quality List Table 2 – Obsolete

Table 2 is now obsolete and will be withdrawn from the COA website on 30.09.2023.

The transition period provides for existing users to complete the provisions of TG07 Code of Practice and for their entry to be displayed on Table 1. No new entries will be added to Table 2 in the meantime.

Table 1 continues without change.

Background

Manufacturers and operators that conform to the provisions TG07 Code of Practice achieve CQC (COA Quality Conformance) and are displayed on the Flexitank Quality List (FQL) Table 1.

There are currently two Tables:

Table 1 – Companies that conform to TG07 Code of Practice

Table 2 – Companies that completed one or more audits but do not fully conform to TG07 Code of Practice.

Table 2 is to be discontinued on 30.09.2023.

Why is Table 2 Obsolete?

Table 2 was introduced as a temporary transitional measure at the time of implementing the CQC (COA Quality Scheme) and transferring data from the previous system. The purpose of recording companies that partly subscribed to CQC has diminished.

The CQC scheme is more effective with a single Table 1.

COA Quality Conformance – Table 1

Each company displayed in Table 1 is required to undergo 5 audits:

TG07 Code of Practice Audit	Risk Assessment Purpose
ISO 9001 quality management.	Management organisation
ISO 14001 environmental	Management of environment
Installation, operating & training manual	Provision for best practice installation and training personnel
Material test	Production line batch testing of materials, welds and valves
Rail impact test	Measures container wall deformation and confirms flexitank leak-tightness under a dynamic load
